INPUT VOLTAGE: 120 VAC, Nominal
50 VAC min., 132 VAC max.

OUTPUT VOLTAGE
Initial: 100-110 VDC for 1 Second (Unfiltered)
Continuous: 20 VDC after 1 Second (Unfiltered)

OUTPUT CURRENT
Initial: 6 Amps for 1 Second
Continuous: 1.5 Amps

TIME DELAY: 1 Second ± 5% (during which full voltage is applied to the contactor coil.)

TEMPERATURES
Operate: 0°C to +55°C
Storage: -45°C to +85°C

ENCLOSURE: Style "N" Epoxy Encapsulated

TERMINATION: (4) #8-32 Screw Terminals

OPERATION: Upon application of the input voltage to the unit, a 1 second delay begins, during which a nominal 110 VDC is produced on the output. After the 1 second delay, the triggering of the internal SCRs is delayed to produce a nominal 20 VDC output.
