Technical Data

General specifications

- Switching element function: DC Dual NC
- Rated operating distance: \( s_n = 3 \) mm
- Installation: flush mountable
- Output polarity: NAMUR
- Assured operating distance: \( s_a = 0 \ldots 2.43 \) mm
- Actual operating distance: \( s_r = 2.7 \ldots 3.3 \) mm typ.
- Reduction factor \( r_{Al} = 0.5 \)
- Reduction factor \( r_{Cu} = 0.4 \)
- Reduction factor \( r_{Brass} = 0.63 \)
- Reduction factor \( r_{St37} = 1.1 \)

Features

- Direct mounting on standard actuators
- EC-Type Examination Certificate TÜV99 ATEX 1479X

Nominal ratings

- Nominal voltage: \( U_{o} = 8.2 \) V (Ri approx. 1 kΩ)
- Switching frequency: \( f = 0 \ldots 1500 \) Hz
- Hysteresis: \( H = \) typ. 5 %
- Reverse polarity protection: reverse polarity protected
- Short-circuit protection: yes
- Suitable for 2:1 technology: yes, Reverse polarity protection diode not required
- Current consumption:
  - Measuring plate not detected: \( \geq 3 \) mA
  - Measuring plate detected: \( \leq 1 \) mA
- Time delay before availability: \( t_v = \leq 1 \) ms
- Switching state indicator: LED, yellow

Functional safety related parameters

- MTTFd = 2070 a
- Mission Time (TM) = 20 a
- Diagnostic Coverage (DC) = 0 %

Ambient conditions

- Ambient temperature: \(-25 \ldots 100 \) °C (-13 ... 212 °F)
- Storage temperature: \(-40 \ldots 100 \) °C (-40 ... 212 °F)

Mechanical specifications

- Connection type: Connector M12 x 1 , 4-pin
- Housing material: PBT
- Sensing face: PBT
- Degree of protection: IP67
- Tightening torque, fastening screws: M5 x 25 : 2.7 Nm
- Note: Mounted on mechanical drive

General information

- Use in the hazardous area: see instruction manuals
- Category: 1G, 2G, 3G, 3D

Compliance with standards and directives

- Standard conformity: NAMUR EN 60947-5-6:2000
  - IEC 60947-5-6:1999
- Electromagnetic compatibility: NE 21:2007
  - IEC 60947-5-2:2007

Approvals and certificates

- FM approval
- Control drawing: 116-0165
- UL approval: cULus Listed, General Purpose
- CSA approval: cCSAus Listed, General Purpose
- CCC approval: CCC approval / marking not required for products rated \( \leq 36 \) V
Inductive sensor NCN3-F25-N4-V1

ATEX 1G

Instruction

for use in hazardous areas with gas, vapour and mist

Device category 1G

EC-Type Examination Certificate

TÜV 99 ATEX 1479 X

CE marking

ATEX marking

II 1G Ex ia IIC T6 … T1 Ga

Directive conformity

94/9/EG

Standards

Appropriate type

NCN3-F25.-N4...

Effective internal capacitance $C_i$

$\leq 100 \text{ nF}$ A cable length of 10 m is considered. The value is applicable for one sensor circuit.

Effective internal inductance $L_i$

$\leq 100 \mu \text{H}$ A cable length of 10 m is considered. The value is applicable for one sensor circuit.

General

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The EC-Type Examination Certificate has to be observed. The special conditions must be adhered to!

Directive 94/9/EG and hence also EC-Type Examination Certificates apply in general only to the use of electrical apparatus under atmospheric conditions. The use in ambient temperatures of $> 60 \degree \text{C}$ was tested with regard to hot surfaces by the mentioned certification authority. If the equipment is not used under atmospheric conditions, a reduction of the permissible minimum ignition energies may have to be taken into consideration.

Ambient temperature

The temperature ranges, according to temperature class, are given in the EC-Type Examination Certificate. Note: Use the temperature table for category 1 !!! The 20 % reduction in accordance with EN 1127-1:2007 has already been accounted for in the temperature table for category 1.

Installation, commissioning

Laws and/or regulations and standards governing the use or intended usage goal must be observed. The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety. The associated apparatus must satisfy the requirements of category ia. Due to the possible danger of ignition, which can arise due to faults and/or transient currents in the equipotential bonding system, galvanic isolation of the power supply and signal circuit is preferable. Associated apparatus without electrical isolation must only be used if the appropriate requirements of IEC 60079-14 are met. Install the device in such a way that the resin surface is not exposed to mechanical hazards.

Maintenance

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.

Special conditions

Protection from mechanical danger

When used in the temperature range below -20 °C the sensor should be protected from knocks by the provision of an additional housing.

Electrostatic charge

When used in group IIC non-permissible electrostatic charges should be avoided on the plastic housing parts. Information on electrostatic hazards can be found in the technical specification IEC/TS 60079-32-1. Additional requirements for gas group IIC. Avoid electrostatic charges that can cause electrostatic discharge when installing or operating the device.

This instruction is only valid for products according to EN 60079-15:2005, valid until 01-May-2013

Manual electrical apparatus for hazardous areas

for use in hazardous areas with gas, vapour and mist

\( C \leq 0.01 \text{ F} \)

\( L \leq 100 \mu \text{ H} \)

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The data stated in the data sheet are restricted by this operating instruction! The special conditions must be observed!

Laws and/or regulations and standards governing the use or intended usage goal must be observed. The sensor must only be operated with an energy-limited circuit, which satisfies the requirements of IEC 60079-15. The explosion group complies with the connected, supplying, power limiting circuit.

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.

Protection from mechanical danger

The sensor must not be exposed to ANY FORM of mechanical danger. When used in the temperature range below -20 °C the sensor should be protected from knocks by the provision of an additional housing.

The sensor and the connection cable must be protected from damaging UV-radiation. This can be achieved when the sensor is used in internal areas.

The connection parts are to be installed, such that a minimum protection class of IP20 is achieved, in accordance with IEC 60529.

Protection via housing

General

Use is restricted to the following stated conditions

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual.

The data stated in the data sheet are restricted by this operating instruction! The special conditions must be adhered to!

Laws and/or regulations and standards governing the use or intended usage goal must be observed. Each sensor circuit van be operated with the stated maximum values.

No changes can be made to apparatus, which are operated in hazardous areas.

Repairs to these apparatus are not possible.

Installation, commissioning

Each sensor circuit van be operated with the stated maximum values.

Maintenance

Special conditions

Minimum series resistance \( R_V \)

A minimum series resistance \( R_V \) is to be provided between the power supply voltage and the proximity switch in accordance with the following list. This can also be assured by using a switch amplifier.

The maximum permissible operating voltage \( U_{\text{Bmax}} \) must be restricted to the values given in the following list. Tolerances are not permitted.

Maximum heating (Temperature rise)

Values can be obtained from the following list, depending on the max. operating voltage \( U_{\text{Bmax}} \) and the minimum series resistance \( R_V \).

at \( U_{\text{Bmax}} = 9 \text{ V}, R_V = 562 \Omega \)

using an amplifier in accordance with EN 60947-5-6

Protection from mechanical danger

The sensor must not be mechanically damaged.

Plug connector

The plug connector must not be disconnected under voltage. The proximity switch is marked as follows: “DO NOT DISCONNECT UNDER VOLTAGE!” When the plug connector is disconnected the ingress of dirt into the inner areas (i.e. the areas, which are not accessible in the plugged-in condition) must be prevented.

The plug connection can only be separated using a tool. This is achieved by using the locking protection V1-Clip (Mounting accessory from Pepperl + Fuchs).
ATEX 3D (tD)

Note
This instruction is only valid for products according to EN 61241-0:2006 and EN 61241-1:2004

Standards
Protection via housing "tD"
Use is restricted to the following stated conditions
The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual.
The maximum surface temperature has been determined in accordance with method A without a dust layer on the equipment.
The data stated in the data sheet are restricted by this operating instruction!
The special conditions must be adhered to!

Installation, commissioning
Laws and/or regulations and standards governing the use or intended usage goal must be observed. Each sensor circuit van be operated with the stated maximum values.

Maintenance
No changes can be made to apparatus, which are operated in hazardous areas.
Repairs to these apparatus are not possible.

Special conditions
Minimum series resistance \( R_V \)
A minimum series resistance \( R_V \) is to be provided between the power supply voltage and the proximity switch in accordance with the following list. This can also be assured by using a switch amplifier.

Maximum operating voltage \( U_{B_{\text{max}}} \)
The maximum permissible operating voltage \( U_{B_{\text{max}}} \) must be restricted to the values given in the following list. Tolerances are not permitted.

Maximum permissible ambient temperature \( T_{U_{\text{max}}} \)
Values can be obtained from the following list, depending on the max. operating voltage \( U_{B_{\text{max}}} \) and the minimum series resistance \( R_V \).

- at \( U_{B_{\text{max}}}=9 \text{ V}, R_V=562 \Omega \)
  - \( 59 °C (138.2 °F) \)

Using an amplifier in accordance with EN 60947-5-6

Protection from mechanical danger
The sensor must not be exposed to ANY FORM of mechanical danger.

Protection from UV light
The sensor and the connection cable must be protected from damaging UV-radiation. This can be achieved when the sensor is used in internal areas.

Plug connector
The plug connector must not be withdrawn under voltage. The proximity switch is identified as follows: "WARNING - DO NOT SEPARATE WHEN ENERGIZED". With the plug connector disconnected, soiling of the internal area must be prevented.(i.e. the area that is inaccessible when the connector is inserted)
The plug connection can only be separated using a tool. This is achieved by using the locking protection V1-Clip (Mounting accessory from Pepperl + Fuchs).
