TECHNICAL DATA SHEET

RS 71006489 Silver Conductive Paint

A silver-loaded conductive paint, which can be used for producing or repairing PCB track. The paint can be used for various applications including to paint-on an electrical screen, or to make electrical connections to non-solderable surfaces. This conductive paint is simple to apply with a brush and is touch-dry in approximately 10 minutes and usable in 30 minutes.

Key Features

- Volume resistivity 0.001 Ω cm when fully hardened.
- Baking at 250-298°F for 5 to 10 mins, after drying improves mechanical and electrical properties.
- Easy to use and quick drying

Note: Shake vigorously before using and replace cap when not in use

Typical Properties:

Product Type:	Paint
Conductive Element:	Silver
Package Type:	Bottle
Package Size:	0.18 oz
Cure Time:	30 min
Applicator Type:	Brush
