• The operating voltage must not be exceeded by more that 10% as this will result in reduced life expectancy
• Luminous intensity is measured at 20 mA on a discrete led unless otherwise stated.
• Luminous intensities and color shades of white LEDs may vary within a batch.
• Luminous intensity will be reduced with lower operating current.

ADDITIONAL INFORMATION ON LED COMPONENTS

• Bi-color leds, by connecting the gold faston (+) one color is produced, by reversing the supply voltage another color is produced – bi-colors are available up to 28 VDC
• The tri-color led has red and green leds when both are connected yellow is produced
### ABOUT THIS SERIES

**Notice:** please note that not all combinations of above numbers are available.

- Gold faston terminal denotes anode (+), silver terminal denotes cathode (-)
- Standard wire length is 200 mm, 22 AWG UL1007, red wire denotes anode (+), black wire denotes cathode (-) for other wire lengths consult APEM
- For LEDs with alternative voltages please consult APEM
- 110 VAC and 220 VAC, short body terminal options, 5, 6 and 7 please consult the factory
- Take care when soldering to the faston terminals (recommended solder temperature 300 °C - 3 sec)
- Pin and Wire options are epoxy sealed at the rear of the bezels, termination options 4 and 5
- Standard tri-color faston terminals are two anodes (+) and one cathode (-)
- Tri-color wires are one red (+) and one green (+) anode and one black (-) cathode
- Tri-color pins are center (-) cathode, shortest (+) anode pin green, longest (+) anode pin red
- Daisy chaining option - has negative (Cathode) terminals linked (3 x Fastons), solder lugs only
- Lamp test facility option 4 x solder lug/Faston only
- We recommend using superbright LEDs for use at 110 VAC and 220 VAC
